

In the Claims:

Please cancel claims 5-10.

1. (Original) A process for the isolation of the product from a high pressure, for example supercritical, process which process comprises the isolation of the product as a suspension in a non-supercritical fluid.
2. (Original) A product, which product has been isolated from a high pressure, for example supercritical, process as a suspension in a non-supercritical fluid.
3. (Original) An apparatus for the isolation of the product of a high pressure, for example supercritical, process, which apparatus comprises a means for the introduction of a non-supercritical fluid into one or more particle formation vessels, one or more collection vessels with a means of controlling the temperature and pressure of said collection vessels, and optionally a homogenisation vessel located between the particle formation vessel(s) and the collection vessel(s).
4. (Original) A product obtainable by isolation from a high pressure, for example supercritical, process as a suspension in a non-supercritical fluid.
- 5-10. (Cancelled)
11. (Previously Presented) A product according to claim 1 which product has been isolated from a high pressure for example supercritical, process as a suspension which consists of one or more components which have been prepared by a particle formation process as described, with one or more components that have been prepared in a different way, and introduced into the described process by charging as powders.
- 12 (Previously Presented) An process as described in claim 1 which process facilitates continuous or semi-continuous formation and isolation of products from a high pressure, for example supercritical process.
